

This is in regards to the proposal to allow LPFM broadcasts priority over FM translator service in my local area of Glendale, AZ. I currently listen to a nationwide radio station, K-LOVE, which is provided over FM translators on 105.5, 89.1, and 100.9 in the Phoenix area. If this proposal passes, it may be possible that K-LOVE's signal may be forced off the air. K-LOVE provides a great value for the residents of Phoenix. It is a family-friendly station. I don't have to worry about suggestive lyrics, or shocking/crass comments made by DJs when I listen with my children in the car. They also provide spiritual counseling and prayer free-of-charge to anyone who calls or writes the station. If LPFM stations are allowed to override current translator service, then not only will the station quality be affected, but I could be subjected, almost without warning, to who-knows-what kind of on-air content from these local operators as I drive through different areas of the city. While I see the importance of allowing local broadcasters the right to broadcast, I think it's unreasonable to allow them to disrupt already established local translator traffic. It will make it almost impossible to listen to ANY translator-provided signal while travelling without sporadic corruption and disruption of the signal. Please do NOT approve this proposal. Thank you.
